ABSTRACT OF THE DISCLOSURE

A printing apparatus and a print control method which obtain excellent ink discharge without reducing the life of printhead for image formation using plural sizes of ink droplets. Upon printing by discharging ink from an ink-jet printhead, having plural printing elements capable of discharging ink droplets in plural different sizes, to a print medium, the number of concurrently-driven printing elements is counted corresponding to the respective one of the plural sizes, based on input print data, then a drive pulse applied to the concurrently-driven printing elements corresponding to the respective one of the plural sizes is determined based on the result of counting, and the drive pulse is applied to the concurrently-driven printing elements.
